### SOIL CHEMISTRY TEST

**\$68.00 - Basic Chemistry + (BC+):** Includes % organic matter, soil moisture, pH, cation exchange capacity, % base saturation, and electrical conductivity. Nutrients: nitrate nitrogen, sulfur, phosphorus, potassium, calcium, magnesium, sodium, plus trace minerals: iron, copper, zinc, manganese and boron.

**\$125.00 - Complete Chemistry (CC):** Includes Basic Plus analyses. This test compares Melich1 and Melich3 extractable nutrients which informs us of the total nutrient reserves available in the soil versus the amount of nutrients in plant-available form.

### SOIL BIOLOGY TESTS

**\$125.00 - Qualitative Package (Qual):** Determines the presence/absence of microbes (bacteria, fungi, ciliates, amoebae, flagellates) & rates from Not Present to Very High Levels. Provides an overview of what is present in your sample.

**\$225.00 - Basic Foodweb (BF):** Quantifies biomass ratios of total bacteria, total fungi, total protozoa (flagellates, amoebae, ciliates) and nematodes. This test provides information to develop a basic program to adjust microbial imbalances.

**\$275.00 - Basic Foodweb + (BF+):** Quantifies biomass ratios of total bacteria, total fungi, total protozoa (flagellates, amoebae, ciliates) and nematodes. Also includes ratios of active bacteria & active fungi. **Most complete compost test**

**\$325.00 - Complete Foodweb (CF):** Quantifies biomass ratios of total bacteria, total fungi, total protozoa (flagellates, amoebae, ciliates) and nematodes. Also includes ratios active bacteria & active fungi, and percentage of mycorrhizae population. This test provides detailed information needed to fully assess the soil microbiology. **Soils only**

**\$100.00 - Nematode Biomass and Diversity (NBD):** Quantifies exactly the biomass and in diversity by ecological function, among the different nematodes. This test is to ensure no presence of pathogenic nematodes in your soils and composts, and to ensure that sufficient predators of pathogens, fungi, and bacteria. **Most complete Nematode Analysis**

**\$125.00 - Solvita Test (BST):** Respiration per volume compost maturity test measures levels of Carbon dioxide (CO2) and Ammonia (NH#). Results give where the compost falls on maturity index; raw compost, active compost, curing compost, mature compost. **Compost Only**

**\$35.00 - E.Coli (EC):** Determines the presence or absence of E.Coli and rates from High to Low to None.

#### Interpretations & Recommendations (IR) for soil chemistry and/or soil biology tests:

>> Turf & Ornamental Trees & Shrubs \$50 each >> High-Value Vegetable, Fruit, & Cannabis Crops \$100 each

# of Tests	Test Type	Subtotal	# of Tests	Test Type	Subtotal
	Basic Chemistry + (BC+)			Qualitative Biology (Qual)	
	Complete Chemistry (CC)			Basic Foodweb (BF)	
	Interpretations (IR)			Basic Foodweb + AB&AF (BF+)	
	Nematode biomass (NBD)			Complete Foodweb (CF)	
	E. Coli (EC)			<b>GRAND TOTAL</b>

**Sampling Instructions:**

Take several 5-10 representative 1" diameter cores from the upper 3-6" of the soil or the zone of absorbing roots in target areas. Mix these cores together until reaching a volume of ~2 cups of this mixture. Enclose it in a sealable quart-size plastic bag, to maintain moisture content. Note: Leave some air space in the sample bag. Teas and extracts half fill a clean empty 1-liter bottle.

**IMPORTANT: Sampling and shipping methods vary depending on test type desired. Please call or email before submitting samples to notify lab.** Soil or compost samples can be sent in a flat rate box/padded envelope for ground shipment. Liquid Compost, Teas and Extracts should be sent for next-day delivery for most accurate results.
